EDUCATION

McMaster University, Bachelor of Technology (Automation Systems Engineering)

Hamilton, ON

- Concurrent **Advanced Diploma in Chemical Engineering** Technology and **Certificate in Business**, Mohawk College
- Relevant Coursework:** CAD for Design, Advanced PLC Programming, Electricity & Electronics I & II, Instrumentation & Control, Systems Engineering, Object-Oriented C++, Project Management

Expected 2028

Dean's Honour List

GPA: 3.9/4.0

PROFESSIONAL EXPERIENCE

Production & Manufacturing (Co-op), Roseland Building Materials ----- 5/2026 - 8/2026

Oakville, Ontario

- Supported the ramp-up of a new wood door manufacturing operation, improving production flow and equipment settings as peak output increased by ~70%.
- Troubleshoot and recalibrated production equipment, resolving CNC sensor failures and correcting out-of-square cutting guides to restore reliable operation.
- Optimized glue-spreader feed speed and roller gap to increase throughput by 100%, reducing glue refills from 3+ to 1 per batch while maintaining adhesion quality.

Residential Exterior Installer (Co-op), Desi's Renovations ----- 6/2023 - 8/2023

Burlington, Ontario

- Interpreted construction/shop drawings and field measurements to determine custom dimensions and angles across five residential renovations.
- Fabricated and installed custom aluminum components using a sheet-metal brake, circular saw, and snips, adapting parts to non-standard building geometry.

ENGINEERING EXPERIENCE

Senior Launch Systems Design Lead, McMaster Pumpkin Chunkin Team ----- 4/2025 - Present

- Led SolidWorks design of a competition flywheel trebuchet, producing manufacturing drawings and revising components for fixed interfaces, cost, and manufacturability.
- Managed BOMs and projected-versus-actual costs, coordinated with fabrication suppliers, and inspected completed parts against design drawings.

Payload & Landing Gear Design, McMaster Aerospace Team ----- 9/2025 - Present

- Designed payload and landing-gear systems for an ultralight SAE Aero Design RC aircraft against defined weight, cost, dimensional, operating, power, and packaging requirements.
- Selected servo and linkage components and worked with the avionics subteam to troubleshoot steering integration, resolving incorrect servo motion during system setup.

LABS & COURSEWORK

- Programmed, wired, and tested Allen-Bradley PLC systems in RSLogix 5000, using interlocks, timers, counters, and logic functions to control process-style sequences; diagnosed faults through I/O testing.
- Built and tested AC/DC, transformer, rectifier, and transistor circuits from designed schematics in NI Multisim, using oscilloscopes, multimeters, and bench supplies applicable to process monitoring.

SKILLS

- Design:** SolidWorks, AutoCAD, manufacturing drawings, BOM development, design for manufacturability
- Controls:** Allen-Bradley PLCs, RSLogix 5000, NI Multisim, Digilent AD3/WaveForms, process control, electrical schematics
- Technical:** C++, Excel, CNC operation, sheet-metal fabrication, dimensional inspection, root cause analysis
